GUIDELINES FOR CARE OF NETTING AND VINYL PRODUCTS

All Carron nets are inspected before they leave the factory and are warranted to be of good workmanship. The materials are subject to deterioration from the natural aging process, improper care and damage due to vandalism.

All nets should be inspected for broken meshes, tears or any other apparent weakness before every use.

Cleaning and Maintenance

Nylon Netting Material:

- Do not launder netting.
- For spot cleaning use lukewarm water and neutral soap suds. Do not use harsh cleaners, solvents or detergents.
- Avoid the use of bleach or any other chlorine based product.
- Avoid any product that has an extreme PH level.
- Compressed air may be used to remove dust/debris build up. **Caution:** Do not use excessive pressure when using compressed air as it may deform or damage the meshes.

Laminated Vinyl:

- For soils and stains use neutral soap suds and lukewarm water. Do not use harsh cleaners, solvents or detergents.
- For hard-to-clean spots use standard household/vinyl cleaners and a soft bristle brush on troublesome spots and stains. Pre-soak heavy, dried-on soils.
- Laundering vinyl-laminated fabrics is not recommended. Laundering may substantially decrease the useful life of the fabric.

Should disinfecting be required, phenolic disinfectants are the best choice for vinyl products, though properly diluted quaternaries are also acceptable. All vinyl fabrics may be cleaned with a 1:10 dilution of household bleaches containing 5.25% sodium hypochlorite as recommended by the Center for Disease Control in Atlanta, Georgia. There is no harmful effect on the fabric. Disinfectants applied at full concentration or in highly concentrated solutions will decrease the useful life of vinyl fabrics. Iodophor type disinfectants used on vinyl fabrics may result in staining.
